

Acme Robotics - Q3 2026 Financial Summary

Total company revenue reached \$18.4M this quarter, up 22% year over year.

Revenue by division:

- Robotics Division: \$12.1M (+31% YoY), driven by strong demand for the Atlas arm product line.
- Services Division: \$6.3M (+4% YoY), roughly in line with plan.

Gross margin improved to 58%, up from 54% last quarter, mainly due to manufacturing efficiency gains at the Reno facility.

Key financial risk: our proximity-sensor supplier, SensTech Inc., has signaled a 6-8 week increase in lead times starting in Q4. This could delay shipments of the Atlas arm if not mitigated.

Operating expenses were \$9.8M, up 11% YoY, primarily due to increased engineering headcount.
